

My name is Lai-King Mau (繆麗琼), I am a proud alumnus of CNEC Christian College from 1973 (Form 1) – 1980 (Form 7). My love of sport has been encouraged & supported by Ms. Ng Chuen Chi, as such I've been in the school basketball team and track & field team from Form 1 – 5. I was also a member of the school choir, participated in drama competitions and active in various school activities. At Form 6, I was honored to get nominated as the Head of the House of Love (仁愛社社長), I led the house won the first cheerleading competition at the annual sport meet. I still remember one of the cheerleading song, 仁愛, 仁愛, 人見人愛! In the same two days event, I also won 7 gold, 1 silver medals in various track & field events which earned me the first place of the overall women's competition. To show my support back to Ms. Ng, I was the first one to sign up for the school swim meet the same year as well even I could hardly swim.

Graduated with my arts major at high school, I went to University of Minnesota in 1980 with Business as my major in mind; but ended up getting a Bachelor and a Master degree in Computer Science. I have to tribute my high school education which provided the foundation enabling my further education that I never thought I would be able to achieve. The degrees naturally started my career in the technical field - research in AI, software engineering in Network Management, technical field services in Telephony, technical program management in Network Storage and ASIC Design. While all these start-up ventures were very innovative, the more notable job experience was with Dolby Laboratories, Inc.

Working at Dolby as a Senior Program Manager gave me a great opportunity to expose to both the audio and imaging playback technologies. Dolby Digital has been known for generations as the de facto standard in cinemas from 35mm film prints; today, it is now also used for other applications such as TV broadcast, radio broadcast via satellite, DVDs, Blu-ray discs and game consoles. As such, it's been very exciting to be part of the new imagining era shortly when I joined Dolby in 2008.

My responsibility to name a few, including leading cross-functional teams to work cohesively with each other's, preparing plans, schedules with proper resource allocations, developing optimized schedules to support an effective resource capacity, tracking and controlling project progress, schedule and risks to achieve completion of project within time and budget. In addition, coordinating work of multi-site teams and partners; reporting to stakeholders and upper management on project status and escalating critical issues.

The works are rewarding as well and here are the highlights:

Go to around 4:40 min down the video clip

Being a minority woman in the technical field has its challenges. I often been the only woman in the work environment and it took more effort to prove myself and get my voice heard. I even have to walk faster in order to keep up with the men co-worker's pace during business travels. Fortunately, I don't find myself struggled that hard compared with others as I was prepared by my experiences in high school to be confident, competitive but kind, and being raised at home to be trusted and independent.

Thank you so much for this opportunity to reflect on my life!
